

IRIS® license and certification

IRIS Security Management® (ISM) is an intensive 2-month certification course. After successful completion and passing the exam, the successful candidate will receive the IRIS® Diploma and license which entitles the holder to legally use the IRIS brand name for third-party security risk analyses. The license holder vows to work according to an integrated risk management framework that identifies, assesses, mitigates and controls the full range of risk categories.

Objectives:

- To obtain a management level of thinking and working in the field of safety and security.
- Support on the decision-making process of safety and security risks and measures.
- Improvement of the safety level of the organization (Quality)
- Improvement of internal and external communication, motivation and support (Acceptance)
- Timely recognizing of risk signals in practice and to formulate risk scenarios
- Make realistic risk assessments and prioritizations
- Skilled in making comprehensive incident and risk analyses
- Give a motivated and well communicated advise with always the effectiveness and efficiency of safety measures in mind
- Develop rational proposals for parts of the safety policy of the organization
- Work according to the principle that Risk- and Security Management is an integral part of business management.

Until 2001 was the certifying body Achmea Business Risk. Since then is the ISM certification training in the hands of Training & Adviesbureau JonkerZwolle.

Security Managers of numeral governmental-, semi-governmental-, International- and private organizations have obtained the certification and obtained the license:
